

USE OF MODERN PEDAGOGICAL TECHNOLOGIES IN TEACHING RUSSIAN LANGUAGE TO STUDENTS OF TECHNOLOGY.

Asian International University 2nd stage graduate student:

Sharipova Gulshan Zafarovna

Abstract: In this thesis, we discuss teaching students in Russian language classes on the basis of modern technologies.

Keywords: Interactive textbooks and programs, Online platforms and websites, Video materials, Virtual reality (VR) and augmented reality (AR) programs, Online communication tools, Student-monitoring systems

The main part: As our President Shavkat Miromonovich Mirziyoyev said, the fundamental reforms implemented in the field of education in our country today are serving the development of young people, who are considered the future of our country, as mature individuals in all aspects, and their development into competitive personnel. During the rapidly developing science and technology of the 21st century, foreign experiences and new projects are entering every field, leading to changes in the development and education sector of our country. The reforms carried out in the field of education in order to fully preserve the rich cultural heritage and historical traditions of our people, and to widely promote handicrafts. It serves to improve the quality of education in full compliance with educational standards.

Today, the modern education system is becoming more and more complicated, in the rapidly changing world, the teacher has to act on the basis of the demands placed on him. At the moment, pedagogical innovations are emerging that create opportunities for quality changes in working methods related to pedagogue activity. All this leads to the complexity of the issues of the pedagogue's activity and attention to the quality of education, which is its main component, and creates the need for new, scientifically based methods of solving them. It is impossible to imagine the improvement of the educational process without a teacher. The teacher is both the subject and the organizer of the educational process. The effectiveness of the continuous improvement process depends to some extent on the content and methodology of teacher training.

Educational Materials Technology Systems (OMTT) enable the use of various technologies to create, edit, store, and distribute educational programs, e-books,

articles, video tutorials, and other educational materials. These technologies help teachers and authors to create and edit educational materials. Some popular OMTTs include:

✚ Learning Management Systems (LMS): These online platforms are used to store, present, test and evaluate learning materials. Examples of popular LMSs include Moodle, Blackboard, and Canvas.

✚ Content Creation Tools: These tools help in creating learning materials. For example, Microsoft Word, Google Docs, Adobe Creative Cloud programs and PowerPoint are suitable for this purpose.

✚ Interactive Whiteboards: Interactive whiteboards allow teachers to display textbooks interactively. Tools like SmartBoard and Promethean ActivBoard are ideal for this purpose.

✚ Video Creation and Editing Tools: Adobe Premiere Pro, Camtasia and iMovie can be used to create video tutorials.

✚ E-book Platforms: Platforms like Amazon Kindle Direct Publishing, Apple Books Author and Caliber can be used to create and distribute e-books.

These technologies help create learning materials and make the learning process more efficient and provide students with interactive learning opportunities.

Conclusion: pedagogues working in the teaching of the Russian language should create the image of a modern teacher in themselves and change the image of the teachers who will teach in a modern school tomorrow based on the above requirements, the quality and efficiency of education is of great importance in achieving
